# High performance NVR

High resolution and great efficiency.  
Quick and precise search enabled by  
Hanwha Vision NVR

Hanwha Vision's NVR allows recording and streaming of videos in super high resolution and enhanced the efficiency of event and channel management with the new UI. It also offers AI based quick and precise object detection and classification on top of smart search.

## Monitor all sub channels without registering them all

With the new Virtual Channel View, user can register only 1 main channel for recording and monitor sub channels without registering them to the NVR. In other words, no need to record every sub channel that needs to be simply streamed for live monitoring.

Registered channel  
Recording and monitoring

CAMERA A  
Channel #01

Using 1 channel on NVR  
(can monitor up to 4CH)

Unregistered channel

Channel #04

## Installation Wizard for easy auto recognition and setup

Local/web based installation wizard with a single UI provides easy and quick auto camera recognition and registration as well as configuration of each channel.

## Design your own monitoring channels with the Dynamic layout

Dynamic layout allows users to freely customize the channel display. Set the best channel display and create the most intuitive monitoring environment.

## Code your own event action with SUNAPI command and Integrate with the Software Key

Users can code their own event action using SUNAPI commands and integrate it with the Software Key. Then, a simple click on the Software Key appears on the channel display will run the event action. Customized codes run separately.

- 1 Code event action\* and integrate with the Software key

\* Simple focus, Day&Night (ICR), Alarm Out, etc.

- 2 Click the Software key to initiate the event action

# AI NVR

## AI enhances accuracy and efficiency

Hanwha AI NVR with AI algorithms provides accurate object detection/classification/search, increasing the efficiency of monitoring operation.

## License Plate Recognition LPR (Search)

Through OCR (Optical Character Recognition) processing, the BestShot images of the license plates are converted into machine-readable text and numbers then stored in the AI NVR in the form of digital data together with the images of license plates. Users can easily search license plates by typing in the numbers or characters of the license plate.

\* Attributes : People (Clothing colors for top and bottom/ Wearing or carrying a bag) / Face (Age group, gender, mask/glasses wearing) when integrated with Wisenet cameras, Vehicle (Types, colors) / License plate (Optical technology converts images into texts for storage, supporting search in text

The screenshot shows the WISENET AI Search interface. At the top, there are tabs for Monitoring, Search, AI Search (which is selected), and Setup. Below the tabs, the 'LPR' section is displayed. It shows a list of results under 'CH All' and 'Date & Time' (2021-01-27 10:08:13 ~ 2021-01-27 11:08:13). Two license plate images are shown side-by-side: one for 'IND-123-34' and another for 'JAT-123-34'. At the bottom, there are 'Search' and 'Reset' buttons.

When managing multi channels, the Hanwha's AI NVR greatly improves search efficiency by allowing users to preview images and videos by simply hovering mouse cursor on the timeline. Moreover, users can configure event and alarm for all channels within a single page.

## Live monitoring and bookmarks

With Live Monitoring, users can configure the split mode as desired to view video footage in real time or find information such as system malfunction, overload or recording status for each channel. In the PTZ control mode, users can click arrow keys to move the PTZ in eight directions or zoom in to a certain area for more detailed monitoring. With Bookmark feature, users can designate up to 100 events for easy and quick event search.

The image contains two screenshots of the AI NVR interface. The left screenshot shows 'Live monitoring and PTZ control' with a split-screen view of four camera feeds. The right screenshot shows 'Bookmark setup and event search' with a list of events and thumbnail previews.

Connect Hanwha AI cameras to SSM for various search features adopting AI algorithms.

- **Best Shot search using unique attributes**

System operators can utilize SSM's 'AI video search' feature to easily search specific events in the video by designating distinctive attributes of objects such as persons, faces, and vehicles. If a user searches specific attributes such as red motorcycle or a man wearing short pants, the best still cuts (Best Shot) of the classified objects in the video will be retrieved. Best Shots can be used as forensic data for accident investigations, playing back video that includes Best Shots.

### Hanwha SSM search

Support quick search using attributes

### Best Shot

Object detection & classification (Person, face, vehicle, license plate)

## Parking management solution

Connect ANPR cameras to Wisenet SSM for various parking management features.

- **Vehicle management & event search**

Hanwha SSM's parking management solution utilizes ANPR (Automatic number plate recognition) cameras offering real-time parking entrance/exit monitoring. Users can register and manage vehicles without additional parking management software, while simple search feature quickly searches and retrieves vehicle footage.

## Stable monitoring

SSM provides safe and stable monitoring environment through Failover.

- **Vehicle management & event search**

Failover priority (High, medium, never) can be configured for each channel. If a camera is failed, high priority cameras will be failover at first. Users can record and save important footages without loss of data.

## Newly updated in Toolbox Plus: Simulate on the map

Toolbox Plus helps you simulate  
the best place for installing cameras.

By uploading your map to Toolbox plus,  
you can test how much  
cameras can cover in your own space.

It can guide you on how to compose and install  
cameras to minimize blind spots in advance.
