C. Definitions

1. GOV (Group of Video object planes) - A set of video frames for H.264 compression, indicating a collection of frames from the initial I-Frame (key frame) to the next I-Frame. GOV consists of 2 kinds of frames: I-Frame and P-Frame.
2. Multi-crop - Operation which allows a user-selected region to be used for a specific video profile, allowing a lower resolution and bandwidth image to be transmitted, leaving the field of view for the camera unchanged.
3. Multi-exposure wide dynamic range - Operation which automatically adjusts shutter speed to provide a wide range between dark and light areas visible at the same time, preventing backlighting issues. Long exposure is used for bright areas and a short exposure is used in dark areas.
4. Smart Codec – Operation in which the camera adaptively alters the video compression for a portion of the camera's field of view to improve the quality of video in the area specified.
