1. General Provisions

A. Purpose

Hanwha Vision establishes this Environmental Management Policy to minimize the environmental impact of research and development activities related to its products and services, and to achieve sound environmental performance through continuous improvement. To implement this policy, the company shall establish and continuously improve an Environmental Management System (EMS).

B. Scope of Application

All employees of Hanwha Vision across its global operations (headquarters, overseas manufacturing subsidiaries, and sales subsidiaries) and its affiliates shall faithfully implement this policy. Furthermore, all suppliers within Hanwha Vision's value chain are encouraged to comply with the purpose and standards of this policy, and stakeholders are also expected to participate in environmental management and strive for compliance. In cases where this policy conflicts with local laws and regulations, the more stringent standard shall apply. This policy may be amended and applied based on the specific laws and industrial characteristics of the respective countries.

C. Governance and Implementation System

Hanwha Vision operates the following governance structure to strengthen company-wide execution of environmental management and systematically implement its Carbon Neutrality Roadmap.

- i. General Management:** The Environmental Management Officer (C-Level) oversees issues and risks related to environmental management and climate change and monitors the progress of environmental management activities.
- ii. Decision-making System:** Key issues are reported quarterly to the ESG Committee under the Board of Directors to determine the strategic direction of environmental management.
- iii. Dedicated Organization:** The ESH Team manages company-wide environmental management, including policy establishment, regulatory compliance, and performance monitoring. In addition, each business site

designates an environmental manager to manage site-specific environmental initiatives and performance.

2. Basic Principles

A. Climate Change Response and Energy Management

Hanwha Vision strengthens its climate change response capabilities by systematically managing company-wide greenhouse gas (GHG) emissions and continuously advancing its reduction targets and implementation strategies. The company pursues specific action items, such as improving energy efficiency and expanding the adoption of renewable energy. Based on emissions analysis and performance monitoring, Hanwha Vision identifies improvement opportunities and strategically reviews related investments. Through these efforts, the company substantially reduces GHG emissions while enhancing operational efficiency and environmental performance, contributing to the establishment of a sustainable business model.

B. Water Resource Management

Hanwha Vision recognizes the importance of water resources and systematically manages the entire process from intake and use to treatment and discharge. The company prevents water pollution through compliance with water quality regulations and regular monitoring. Furthermore, Hanwha Vision efficiently utilizes and manages water resources by improving processes, implementing water reduction activities, and enhancing wastewater treatment efficiency.

C. Air Pollutant Management

Hanwha Vision systematically manages air pollutants that may be generated throughout all business activities in accordance with relevant laws and regulations, and operates a management system to minimize emissions and environmental impact. The company ensures the proper operation of air pollutant emission and prevention facilities and complies with legal standards through regular inspections and monitoring.

D. Hazardous Chemical Management

Hanwha Vision minimizes the use of hazardous chemicals during the product development and procurement stages and ensures safe management through pre-review and approval procedures before introducing any hazardous substances. Furthermore, the company establishes training, inspection, and emergency response systems to prevent leakage accidents, thereby strengthening the protection of both the environment and safety.

E. Waste Management

Hanwha Vision legally disposes of waste generated during its business operations in accordance with relevant laws and internal standards, striving to minimize environmental impact throughout the entire process. Furthermore, prioritizing waste reduction as a core principle, the company continuously manages the amount of waste generated at its business sites and expands recycling and reuse throughout the production and operational processes.

F. Material Management

Hanwha Vision pursues responsible material procurement by evaluating and selecting suppliers based on their environmental management capabilities. Furthermore, the company expands the use of eco-friendly certified materials and operates a material management system that considers resource circularity to enhance recyclability and reduce environmental impact.

G. Product Environmental Management

Hanwha Vision strives to minimize the environmental impact that may occur throughout the entire life cycle of its products—including design, manufacturing, use, and disposal—while creating sustainable business value. In the design and manufacturing stages, the company reduces its environmental footprint and strengthens eco-friendly competitiveness through recyclability,

hazardous substance reduction, enhanced resource circularity, and management based on Life Cycle Assessment (LCA). During the product use stage, Hanwha Vision designs products and provides relevant information to ensure customers can use them safely and efficiently, thereby supporting the minimization of environmental burdens and safety risks. Furthermore, the company reduces waste generation by enhancing the recyclability of end-of-life products. Additionally, Hanwha Vision complies with relevant laws and regulations to prevent negative impacts of its products and services on customer health and safety, and realizes trust-based business by sharing necessary information with stakeholders.

H. Biodiversity Conservation

Hanwha Vision adopts the conservation of biodiversity and the sustainable use of biological resources as core principles across all business operations, minimizing its impact on the environment and ecosystems. Furthermore, the company strives to prevent deforestation that may occur during business processes and contributes to the protection and restoration of natural capital.

3. Environmental Management System (EMS)

A. Environmental Management Policy

Hanwha Vision establishes an environmental management policy for climate change response and environmental conservation, actively integrating it into overall business operations. Furthermore, the company continuously monitors domestic and international environmental regulations to regularly review and revise the policy.

B. Environmental Objectives Management

Hanwha Vision establishes and manages key environmental factors as indicators for its business activities. The company develops short-, medium-, and long-term improvement targets and implementation plans that

reflect environmental regulations and stakeholder requirements. Key Performance Indicators (KPIs) are selected focusing on high-risk environmental areas, such as energy consumption, resource recycling rates, eco-friendly product design, and greenhouse gas (GHG) emissions.

C. Environmental Training

Hanwha Vision operates a training system for its employees to internalize the importance of climate change response and environmental management, while striving to strengthen practical implementation capabilities.

D. Emergency Response System

Hanwha Vision identifies and evaluates risk factors in advance to prepare for emergencies such as natural disasters and environmental or safety accidents, and establishes and operates emergency response plans to minimize casualties and environmental damage. Furthermore, the company continuously strengthens its emergency response capabilities through regular training and simulation drills.

E. Environmental Performance Evaluation

Specific action plans must be established to achieve the short-, medium-, and long-term targets of Key Performance Indicators (KPIs). To execute these plans, the person in charge shall secure the necessary human and material resources and, if necessary, collaborate with relevant departments to do their best for effective goal achievement. The person in charge shall regularly monitor performance against targets and may improve indicators based on the results if needed. Through continuous implementation and monitoring, the company shall strive to achieve its KPIs.

F. Stakeholder Communication

Hanwha Vision defines its key stakeholders as employees, customers, suppliers, local communities, and investors/shareholders, and transparently shares its climate and environment-related goals, implementation status,

and key issues through various communication channels. Furthermore, the company actively collects stakeholders' opinions on climate change and environmental issues and seeks collective solutions through continuous consultation and participation.

G. Supplier Management

Hanwha Vision provides continuous support to raise environmental awareness and enhance implementation capabilities throughout the entire value chain, including its suppliers.

4. Addenda

A. Enactment

This Environmental Management Policy is enacted and shall take effect on **March 17, 2026**.

Environmental Management Policy

Environmental Management Policy

Hanwha Vision strives to achieve world-class environmental management and enhance human life to be healthier and more abundant. This reflects our commitment and promise to fulfill corporate social responsibility and ensure a sustainable future.

1. Compliance with Laws and Regulations.

We go beyond simple compliance with domestic and international environmental laws and conventions by applying more stringent internal standards. To achieve this, we conduct all business processes based on the Environmental Management System (ISO 14001).

2. Waste Management and Resource Circulation

Based on the 3R principles of Reduce, Reuse, and Recycle, we aim for Zero Waste to Landfill across all our business sites and take the lead in establishing a circular economy.

3. Energy Consumption and Climate Change Response

To achieve our carbon neutrality goals, we optimize energy efficiency within our business sites, reduce greenhouse gas emissions by expanding the use of renewable energy, and actively respond to climate change by participating in global initiatives.

4. Chemicals Management and Eco-design

We establish stringent internal standards that exceed international environmental regulations to prevent the inflow of hazardous chemicals throughout the entire product life cycle. We develop eco-friendly products by minimizing environmental impacts generated across the stages of development, manufacturing, use, and disposal.

5. Awareness Improvement

We provide environmental education to ensure that our employees recognize the severity of the climate change crisis. Furthermore, we continuously strive to enhance environmental management awareness among all stakeholders, including suppliers within our value chain.
